Tutorial

## RATE THIS CHALLENGE

Check [Tutorial](#) tab to know how to solve.

Here is a sample line of code that can be executed in Python:

```
print("Hello, World!")
```

You can just as easily store a string as a variable and then print it to stdout:

```
my_string = "Hello, World!"  
print(my_string)
```

The above code will print Hello, World! on your screen. Try it yourself in the editor below!

## Input Format

You do not need to read any input in this challenge.

## Output Format

Print Hello, World! to stdout.

## Sample Output 0

Hello, World!
